14 FEB 00 | BTAG – Chicago (ORD gate) | WEEK 4/13

1. Bob Paulson: data – base; 58-57 one pass left < 250 pole radial; some passes higher – up to 28 ppm at the surface; on average higher PCBs in surface layer than when started – just did not develop to the "complete" list but of 58.5; low value elevations close to complete; air sampling – no probable – could split to labs as bid; waste bid; waste long completed by contractors who did work – available from RP&T; new database will be available on CD

2. Paul Kulyas powerpoint presentation – RF Battery – Bay w/ basin layout large – PCB fate transport; whole sediment dredged or remedial work – task memo will be briefs summaries, but also referred to; CD wants to avoid offsite between task memo & RI/FS model layout ∴ not too much overlap (?:?), PDAR – light water so important to bathymetry

3. Eric Kovalick powerpoint presentation on RI – have Dave Mitchell talk to Eric Kovalick re water chemistry data for RI as well as his contacts

4. Dave Mayer powerpoint presentation on sediment transport

5. Rick (RETEC): sources of chemistry data to talk to Bill Creal at MOEA re chemistry data

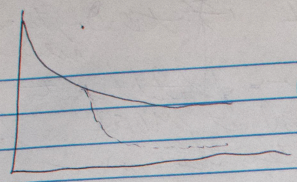

6. Dave Mayer – dechlorination memo – PCB release / pathways / rate; physical removal fish; may want to cross-reference fish analyses; Bob "mechanism" (or mech) page – PDAR; 2 year 2 down; for est only 4 sampling stands – fish – just starting; PDAR – make sure hot at FWS / talk to Dog

7. Bob Paulson (RETEC): sediment remediation memo – Cathy for Kansas data / info. – most site – det stall if success

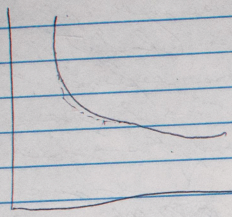

8. Gregory Ross (Robertson): pilot w/ WWT & PSPA for 70 tons of sediment; August $500K pilot ($400K also from Mayer); ~ 850/ton (cap only) (dredging less)

9. Lunch

10. Jim Mayer: Mapping: Jon Lenz (?) (SAIC): sediment and water – RAO for Bay (away from RETEC) – complex; PDAR: need to tie bathy to bioassay & RI/FS; PCB pixels & chemistry – need workable approach or limit to specific areas or hypothesis / bad data for [illegible]

(conversation w/ Jay Dietz)

11. Dave Wegner: update/evaluation of PCB exposure to fish

12. RME discussion: Doug, Brock, Tim:
- Tim: makes no difference
- Dave Wegner: Doug's approach actually more conservative w/ R.L.
- Doug: 2 weeks: UCMan for approval from rating; 90 d. duration
- BBAR: actually depends on population endpoint used

15 FEB 00 BTAG - CHEMAG

1. continue RME discussion: modify language at 6-70; change RME term; include 1 fish & 1 diet; example (PCCo + mallard) in document; include w/ place holder for studies to be tested if necessary

PCCo weight (ask Ric for reference) X Bob Rowe: 1½ page comments. Expand fish data

2. HH risk assessment (Dave Wegner)

risk bar: Mark D. & Brock J. told Doug B. that they did not understand our RMR argument until yesterday afternoon

3. Trends (RETREC) on Eco-risk Apps
- staff must constantly read & address uncertainty
- still exhibit differences w/ EPA BRA (e.g. not that absent from RETREC)
- Tim T.: the CEA/HHRA/TMDL modeling not part of the BLRA, only the FS
(BBAR to Doug B.-sub- same as hom listserver BLRA models for HQs and FS time to end point) [HQs TODAY CHRP → : (BLRA)] [TIME TO REACH HQs FUTURE → : (FS)]

ALTERNATE ARROWS WALLEYES (FISH PCB)

policy vs. letter one in FOFOO - Tim T. will look if the same for BLRA/FS boundary explanation

4. Round table discussion on eco-risk-policy
- Jay Dietz / Doug B. Tim: need context for use of studies, particularly when NOEC based on no response of effects; Tim T. agrees to add clarifying language
- OK conclusion - look @ body weight
- data: bald eagle data set (Doug to Bob Lundin); bird location data - Lundin will send to me

PAHs (organic, also KRSA problem → Dave Dan)
- agree : to Ed
- Ed / discuss for water instead of radionuclides + filters - already started (agreed on at both)
- work groups : got discussion on EPA ERA for otter liver ; for ADMRT record moved in, referenced in RFFS not ; not part of the RDRS BRA ; discuss the following
- see p. 10 ; improvement on EPA ERA coming
→ [use p. 40 of EPA ERA as example]

5. models
- code available for all models ? Ed + Dan + Bob - yes.
- Bonnom & Lydeard have code to address fact that RETRX lite gone / but not 2-4-7 EQ lite 2-4 / but not /

6. fly to Twin Cities w/ Brad

15 MAR 02 1. Chicago 58/57 (Doug Hall, Jim H., Matt C., Barbara J., Eric B., Tom N., Bopp S., Bev Dobson-Francesa K., Matt R., Dixon & Roger, Jean Hoffsis, Charlie W., Frank H., David A., Ivy Phoenix, Doug, Larry Zanger, Carrie Watkins, Kellie Wilson; [redacted] John Zeller - Bob Paulson & Ed Repa?: no (D. Hall only for WI)
- Doug Hall: presentation of the current situation & how occurred. ref Bob Paulson memo. also presented other maps of and by depth in the project area (post dredge); dredged area was sub-area of SMU 58/57: ~ 400' x 800' divided into 22 sub-areas; FRC collected 92-95 prioritized actions, rel. happy and analysis of deposits and SMUs: 58/57 was determined #1 in Reach; surface [level] of PCBs (25 ppm for 57/57); map [illegible] (>500 ppm); mass (~ 2500-3000# PCB) / 1325# removed so far / 800# in the lagoons or above; FRC dredged by Leader or R+H + State/Corps Agreement which included selected retention pond (not done yet); further discussions led to 58/57 design: good & working removal, gross budget of 7-8 M; 2M added by St. James Cultural was used for landfill at St. James; vault (Jean Paulson stated) contained 38 was actually [illegible] ; crew stated argued that post dredge levels would be higher at the surface :: 1 yard ; west bank to 25, 26, 27 to to 20' x 30' x 1/2', 2nd pass over cut (only area more than 1 pass) of alteration (changes above more dredged than Paulson's memo); Jean Quinn: how come only 20K - this has more in project & it became selective not stuck as not on the goal

[Info: Doug and crew actually dredged only for upper 30 of the lower 36 not all together]

start eye problem / water tunnel soap etc. -
ran out of time :- BM best design when started,
also want to keep final [ ] a surprise - Parker graphed
[Bill Mars worked at this part] ; <70 ppb detect - 7 ppb
in the 4 sub-units w/ clamp pass ; Powell - to parent (Clam)
watched leg design (distinguishable?) - GH - yes ; 27-4,
spin gas design to sample 4 subunits 3/4 dropped;
2 dropped below the RFFS 250 ppb level ;
therefore this design method can achieve the
end-load goal of the RFFS: 0.75 would
be baseball "Hall of Fame" ; Roger D. interested
1 & 17, then wind up: GH: shows clamp pass
is critical ; Leah: go to clay instead
of light bulbs ; GH: Report N used to
lookout - but have / use w/ 145 gram :
probably because pockets at bottom -
like trying to snowblow very flake of
snow ; Bill Mars: created 10 hole - robot
about sloughing etc. ? GH yes passes spread
- could slough etc - problem w/ cutting a
hole - should stage the work so 100%
at close of each passes minimizes the
problem - also talked to ACOE &
said to leave 2:1 or 3:1 slope (but
not done here) JEM H: looks like maps
show lower [ ] at Best on SE side -
Bass on S side GH 50 50 (not part of
footprint) Bill Mars: solving problem
could end up expanding outfall due - need to
make structure better than worse ; GH
immediate risk [ ] vs long-term risk (mass)
BM no - unequal argument - may be different for order
of [ ] ; Rollie - 16 & 17 - drawdown just
depth or also grade which may be elevated -
GH: better ; Matt C. 13, 14, 15, 16 show [ ] w/ depth
- how much volume by yds above the big pass
GH analysis methods for risk segments for order -
could redesign for [ ] not higher than design -
could also complete design of yds to 80K yds
MC - but more limited in scope GH could look
and see ; Leah H. - solution is to finish the
project MC - need to know limitations more than
compared to risk ; Roger B: calculation of risk?
GH - not yet
- Matt Clark on 4½ risk: also included: 47 kayaks
adjacent to site - new actuarial & conv:
2K group some of whom consume, and/or
life cancer risk 1/1000 (long term) - maybe not
emergency response ; non-cancer risks more short
term (mean exposure for pregnant ?) 50X the
cancer risk ; whole 0 & 4 could be also
emergency ; challenge smaller segment (1% of
0 & 4) which is unused) closer more 16 & 17
risk ; adding to closed minority subset average
0.25 ppm is long-term H ; 500X over limit 1%
of area ; considering caged fish study ; difficult
to quantify risk - easier to show that and close ;

agency rules could upset the problem over To Bay
Matt R: how big to see if beds; Burke Dr.
early May put in water; 28-day study - end of
May; light [ ] by mid June; PSAR: Candy
Schaal & Gladson R. data: BSAF also FRS;
GH also Shlogman; told b- could absorb
fishes at the spot + or -; MC - but solute
plus small area plus factor at shore - qualitative
only probably
- Burke Iowa - ecopath (check of envelope); many
lakes - latter inserts at site; latter fish
in the area (carp + suckers); piscivorous birds -
mean [ ] now 116 ng/kg (whole body); standard
but not complete; std. qual. criteria (ONTARIO
NOAA, Canadian Ministries, EPA) for both
inserts: 0.02 ng/kg - 530 ng/kg (530 ug)
outlier: all not are below 0.26 ng/kg - 530
is "severe effect" level for ON; 0.24 is EPA
basis for NOAA [Ed for] "probable effect";
"weight of evidence" to look at the reports to
better fish in the area (e.g. caged fish data)
estimate fish [ ] in new time: biota/sed
accumulation factor (BSAF): Ce/lipids,
Shlogman R BSAF 2.8-47. (560 / OC 560)
fish 324 ppm - 1545 ppm; Mono: what
about effect on the whole population? 4 segments
about only 1% of area; PSAR: also working
arguments for downstream; PH - bunkers
up & whole will work, hope he will fill

(26 herbert)
- Jim H. - discussion of TM 26 - #193 request is
just up/down of SMU 55/57: loss of 45 cm w/
mod of 55 cm; GH: [lower thumbs labor
sets curtains off of 400 ft arches tower; also TJS
rafts were prop wash related] GH ACOE design
tuning slips in 1990
- Lunch
- Roger - EPA response EPAR5 - sufficient risk to merit
action, no new set or regulation as AOC as UAO,
PRP - willing to cap; 106 order may be preferable,
maybe something else; last point for order in
the future; should to think hard for 106 order;
if order, what do we probe to do?
- Jim H: need to evaluate cap & dredge + waste
record no matter what we do; Pat Shlogman
must also address what we will do if they
do not comply: cost recovery or preliminary
injunction based on the scope of the order:
litigate liability & defense & counterclaim;
the latter would take time; 1 of 4 available
judges would be favorable (Matt R.) - other
3 wouldn't be as good + thanks or, good
order & fund: two judicial review points
govt states it; Fishbow: 1/2 of the costs
could be raised pursuant; 106 cost
recovery possibly no fund (end late)
X - PSAR - GH: any final bit counter on EPA-led
work at this site? [GH: email from Roger Meyer
state report + railway timber for PRP to comply
in/on voluntarily; extend order? so not fund]

Roger Dennis: FWS under? Joan - not clear if can because RPA but PWR - Hunting willing to sign if appropriate; Charlie Schmidt support available

- EPA 6 available: 2nd pass more affordable to complete whole project

- RIFS always defender cop from other area; can justify not many opportunities

- Carrie Watters: need letter from WF please just for the order, Bob to [illegible] to [illegible] Matt R: want to use Ted. contractor to do: Doug: WQWR coop statute for coop, design 2nd pass w/ Corps. Jim & Roger work on package for HQ (Magnuson Stevens wording draft of IRF order - look to go for parallel order Doug Hall: Many RFs on hill also over 115 ppm (Aquatore was similar approach). ② can RPA just perform removal? good (but not Ted's damage) ③ can PRPs slow RI/FS via order, ④ can order be made as a benefit to the PRPs? - would order to reduce liability on whole pots; ⑤ credit towards liability Don: civil penalties not deductible, but injunctive sleep usually is

- CH: EPA James Bold handbook is outdated on POK removal; not other companies, non other govts Bob Taylor volunteer to [illegible] of PFOS use like lead gas issue

- design level at 1: not higher than legacy [ ]

2. review all SMU 56/57 correspondence / notes from meeting at airport; also debrief w/ Joan (a little w/ Charlie too)

21. mail sent & was fax to SMV 58/57 & Jon Hardy

31 MAR 00 (2 hour) Madison (John Hanson, Mark Reiner, Doug Hall, Bob Paulson, Bruce Baker, Cynthia Friend, Tom Nelson, Barry Scheider, Rollie Wilson

1. MEETING)

- gave SMV 58/57 background (work in progress for RD) to Roger Jones
- 2 hr intro: state water FRG voluntary finish SMV 58/57 with the legal malware; last week Tom/Bob/Rollie met re DJ Jones final rule fully (1 hour disc); pre Cathy Bratt real something out of it; WDNR and other govt. parties to move forward
- MR: approved plate last week w/ proposal (case had sent); plan that FDA willing to take-partial waiver; confidential settlement discussions - not subject to public discussion; 58/57 & NRD: Jones can provide wants & FDA form Prof as legal & will pay pair share for NRDA as do/were by State NRDA; part paid via 58/57 & part by cash & expenditure; spare 49K pds of phenols; footprint & methodology would be model out to 2-mile; no cap needed at Lg because near channel (red mv); mile 8.9 are & Eckfelt available. St. Jon well manage the project; in letter: Dupont assurance from trustees on NRD by May first 2000; must find by then to be done in time; write agreement

followed by CO by Oct 30; CMOS from EPA and trustee from NRDA contractor perhaps; value of in-kind services would be credited as well; budget from last year for on-shore facility cleanup - which would not be remedy in place; F&F would have to support in court as challenge; WDNR would need to concur as lead trustee; State would have to commit to expenditure planning; F&F agree no admission of liability; trustee/applicants not to participate FJ 3rd party suit; need signatures for authorized/delegated officials; this would be 1st time that Lt. Gov stepped up to plate; unless prompt removal + low facilities + expected - no one else can do it + FRC not willing

- JH: FJ supplied them to FRC; upset. he will meet; will not disclose info to them

- MR: don't need 106 order; faster than 106 order; don't need delegation petit; trustees should settle; might be more in time to do it

JH: NRD: appoints NRDA model; data there; prompt restoration; can come to agreement kinds of projects; cash also preferably can pay back Fed. NRDA; meet w/ Pete Leger early on to avoid subs NRDA - Pete said no - on way - why; - DOI can + does settle early but need to counts + don't go first; talked w/ State trustee rules land + has complete simulation over zone; WDNR interested in pursuing NRDA settlement. FJ prefer all but willing to look at State only; call all avoid litigating issues like S.O.L. + baseline, etc.; might be able to preclude other PRPs at one port - might set up dynamic for larger (or other) issues; more cooperative approach; not seeking maximum release right for 56/57

MR: also not asking for data into RDPS; encouraged by State + so have stated position; assigned agrees; paperwork for finance; etc.

- JH: have many NRDA consultants; most to be PRP but available to FRC ad hoc; Pt. Comfort has the consultants for NRD (all but one) - ready to go on detailed discussion (TER + LEI w/ TM group)

- GH: if Lt. Gov looks from FRC would consultants be available to FRC (not stated)

- JH: might not work (not stated because out of mediation; don't know how will play w/ FRC; Prepared to get up meeting dates; maybe 2 tracks of meetings - some overlap; want to push fast and for time of essence for 56/57 - FJ ready - deal relief would take type but agreed in principle ok

- GH: give everyone chance to ask questions

- MR: money for 56/57 mostly on FJ both cases + NRDA

MR yes; but not double count

caucus (MR + JH left)

- RG: on evaluation side; could deal w/ NRDA not part of equation; like AOC paradigm: model 106 on how to start with; OSC w/ need authority; + w/ FY; can't order more test PP landfill

RG: keep scope defined & focused

GH: 49-50K for 54/57; natural disasters is 9K; only the 2-5 page is 3K

AG: can make a deal on residual side

OA: 3 compromises possible: ① State/Fed/Tribe compromise on value of SMU 58/57; ② State/Fed/Tribe compromise on value of NRDA as in settlement; ③ compromise between FEP and PRP on value of NRDA

// end of week

RG: deal is possible on residual side; agreed 106 order in 2 weeks

MK: helpful to get letter w/ what you have in mind for each 4 types of projects

JH: hung now experts & DOE tells

MK: need to know how far apart to attempt if doable by May

JH: they are [redacted] many these experts - but can talk & bridge gap

MK: if likelihood is high that would occur quickly

CH: NRDA negotiation could thwart the 58/57 timeline

MK: proposal on NRDA possible?

JH: haven't thought about how to do it - start w/ to provide how; conceptual way & piece of pie will take too long; get teams together and talk about how

MK: not trying to delay

RG: terms agreeable?

JH: an appropriate NRDA settlement is required for SMU 58/57; prefer global NRDA but willing to do one w/ State only - as long as balance can withstand scrutiny; SMU 58/57 contingent on NRDA settlement

GH: what if can't close NRDA part quickly

JH: will know when it happens

RG: EPA will step in at some point

CH: why can't split SMU 58/57 w/o NRDA

JH: advancing $ for FRB by doing work on 58/57

RG: SMU 58/57 will not allow to residual responsible

JH: want as much settlement as possible

MK: more skeptical about bulk

JH: skeptical before & FRB/WI cut deal anyway

GH: must talk to Bruce & George; Bruce intent in negotiation, but need agreement by all govt parties

RG: BBL data?

JH: pending submission about why not ripe. & subst. response w/ data to EPA

- evaluation moving next week; decision on NRDA meeting next week - would involve experts

MK: agreed 106 may not be only mechanism; NRDA separate - 106 would do away w/ that

list of issues to discuss at NRDA meetings

= meeting over

CH: de minimis: can only levy $ to figure expenses for this settlement; rel. state - but might not be right figure

MK: what if we have to defend? $0

CH: FWS will have to defend; unless money goes 4 hour agent - lead-lawyer need account no/access; advise locals

2. call Bill Hartwig

- FJ: willing to finish all of SMU 56/57 via AOC w/EPA + WDNR in exchange for exclusion of NRD: agrmt in-principle by Wrong; State-lead + State assessment - but willing to look out agmt-to-agmt; must have EPA; don't need Dol trustee
- WDNR willing to enter agmt w/o Dol trustee if necessary
- EPA willing to go to AOC or modified sixley if proper to split off NRD (FJ-no split)
- d called WDNR (Linda) if they would consider limiting the NRD claim to a $ cost equal to the project cost (Greg will ask, but clearly not willing to agree limitation)
- AAR 4 1:15 conf. call to determine if Dol trustee will not NRD violation; agmt 5 meeting to attend or ready

* our leverage: ① EPA ② A.A. Ads ③ Ballotti ④ P.R.
* Lt Jones leverage: ① willing State; ② can do 56/57 easier/cheaper than NRDA

24 APR 00 Milwaukee; allocation: Gary Arnold, Grant Wilde, Dave Alb, Maureen Kelly for Bob Gilfillan, Roger Davies, Peggy Lehrsch, Tom Nelson, Grant Velbel, Jon Witthuhn, Cynthia Wood, Dick Cadby, Bob Wheeler

1. Maureen (subs) - call for dredge - 6' of fill, Geo Fill
2. Anadrom presentation (see handout)
   - 4 main areas of uncertainty that would affect Big 3: Fish. Fill. Attach.
   - PCB loss from production
   - % removal in bony pts.
   - (H&G used for hydrodist.) distribution of lipids to dishes
   - lipids from gonad
   - would like to see Abbott specific info to compare
   - last attempts for the 20.16 thru mark, including more likely assumption change for Big 3
3. Velbux questions
   - too much time talking to RMT; sole goal is to advise their allocator; very little support for their arguments; boney pt argument bogus - 45' vibrator time; Gary - % solvent loss per machine was good, but agree that bony pt calculation needs attention - specific gravity of the solution; Dave W. - 5% loss estimate from 1970s for whole procedure - old methods used air lines - he will send to Gary; % of total shells to NCR?; 1971 (CH) gravel report on Apalachicola RTW - no copy; Prof. Boyle had more too

- Dr Jones info sent previously for solids calculation (RRR & RRD)
- 50% partitioning - not that higher as measured pilot; Dan - depends what goes - also lots voids - hard to make organics
- p. 15 - still using 1992 comparison to water quality models? Dan - now done; same assessed by RMT; Dan - reluctant to say what is best of 4 scenarios until look at Y less variable closer - will necessarily change the bottom line
- 90% for Valley assumption; LTC assumed 250K pounds lost (lost); try to compare to other analyses & mass balance; Dan - not appropriate to scale back from calibrated
- why go back to mailing? unless can do anything better; Dan - a lot more info can be found probably - probably will send up w/ 2-208 #; won't you just get plotting? will know their position & magnitude
- 1996 real flood years; Dan - data always reflect what has been after
- microcosms could change but during design & treatment - could go up or down; Dan - no departure information
4. next steps
- not a drop - small mail info; plan send pg
- focus on REVISED WITH pending

- work on 4 remobb plots & package
- coordinate w/ Jim or additional info.

+ propose articles to Rotocki

Barry Johnson (former NSOR Board) new duties + chief (very small group; committee; PRB; gov't; Ed Callahan; GEK; Export; BOPC; AAE) (associate director)

4 MAY 00

1. to Neenah for AF HS peer review of RA (assessment)
- introduction (Rotocki); guidelines from PRB: ① academia or panel; ② follow EPA guidances; ~~[illegible]~~ ③ not "white is better"; clearly unbiased; ~~[illegible]~~ supported by PRB; preliminary discussions w/ Export, who sent RETEC document; 3 panels of 4 + 3 or eco; synthesis w/ report; Barbara Callahan to support effort (plenary + synthesis); looked for conflicts of interest; will publish report in Human + Ecological Risk Assessment Journal (Section: debate + commentary, ② green papers; ?); special issue w/ invited comments; Peter Chapman (Assoc Editor for debate + commentary); David Ludwig + Larry Saragoza: mass removal via rail (Cuyahoga) selection; probably couple of extra comments (8-12 total); August or October special issue; ① Debate + Commentary; ② Committee Report; ③ Top R-selected articles; working w/ Dave Ludwig on articles and comments
- introductions: by committee (Barbara Callahan; Roy Yang - Cal St Univ (LA); Dave Mauriello - NJ DEP (ecc); Rudy DiGiulio - Duke (eco); Chris Mazzaferro - U (eco); Chris Teaf - FL St. U. (eco))
- Eco RA subcommittee summary (Mitchell); evaluates Export + RETEC Route; will also review final RETEC report; 2 way; different approaches + conclusions; Export [① site specific based on site literature + follows EPA guidance; ② some studies guided to exclusion of others - limited data base; full range + would have possibly larger conclusions; also didn't use all fish species] RETEC: [① literature-based, lab data for endpoints; usually most sensitive species; many conservative estimates of exposure - use low end EPA, but should have values - upper]; [overall: ① neither real. all relevant info.; combination of the two would be comprehensive; parts of both should be brought forward]
- HH risk (4 yrs): [① both reports have strengths + weaknesses; ② bottom line that same data info could be used to completely different conclusions; ③ ex. of weakness - too much emphasis on long-term lifetime cancer + short-term development may be more important; ④ point estimates vs Monte Carlo - both should be used]
- Dave Ludwig presentation (see 3 handouts)
- Barnegat: eco presentation; panel questions: how explain 20 mile when 100 should exist based on habitat; answer: habitat is actually very limited to areas of vast shoreline; panel question: any modeling of actual movement of PCBs + bioaccumulation to top predators; answer: yes - will do WONR, EPA FRG, Pat Lee doing modeling; [illegible] technique very [illegible]

(over)

are model results corrected w/ measured? for fish & gr; what about lights? how to do w/ eagle? - would be hypothetical speculative; chemical mixtures? no; but could change effects of PCB? yes - could be organisms or adaptation; fish + swallow + blackbirds used this study; bone used apparently compared to shellfish - controls used for studies; habitat: did ask can somehow vary rock & channel; panel: used WHO most place, but STATE for marks - why? WHO recommended for mammals compared to fish (more conservative); panel question: need more likely PCB, but overstated in fact - have underestimated; didn't have egg data; wouldn't it be better & more conservative to use fatty tissues - models & data were based on whole body; don't have lipid up. data; huge differences between factors (FCF, BCF) & applicability of lake trout to yellow eye may be masked due to fat differences; have because they are in different location (walleye vs lake trout); panel: were some animals above TRV for mink, but removed because outside of assessment area; panel: only eggs have mink data; this is all of the mink data; panel: mink very possible - not at all conservative - no safety built in at all;

are frog by much lower thresholds; not protective vs safety factor; panel - taken from Lebret paper he cited 100 ppb threshold? - don't know what this endocrine was; fish diet model inherently bad - you need to do that; panel - 2 orders of magnitude lower thresholds in west literature; panel question: total weight to Custer mink?; - also population explosion; danger in doing that; many other PCB papers not pertinent - not included - must look at Tillitt, Giesy; panel: need path for current risk is risky; panel: need more evidence than - can explain age of study if want; different for NRDA side - can bring forward to ERA; [illegible] terms may not even belong here - argument w/ UV-radiation use - population trend is upward; panel question: terns eat different fish than eagles - don't know if similar / comparable; panel question: not conservative, did not include all of the relevant literature; panel: copper 87 is equal to 126 (a/TEF) - you don't have copper 87 data here; panel question: if had lumped data on mother & children? (did not follow this at times); panel: on both groups + both HHRAs; mixtures issue - state of the art - can not look at single chemical - 10 molecules at detection limit or maybe - can not just tributes or - all of the stuff go into milk & fish at concentrations back - agree - but in its efficacy as tissue - also lump HH - eggs data for [illegible]

panel: goes beyond this - Ø-conc, don't want to pose many problem; panel: long ½-life afterward; panel: in your best interest to balance to avoid leery dismiss out-of-hand

2. more mid: (EW) Arroyo, DOS - questions on FRGB, L.Ca. DOS issue 22-574-5418

3. Best Bindings on HH; panel: fillet only? yes - shoe-off; TPR random digit dial surveys for whole State; mail survey diary; panel: Arroyo population? not sleds; not all 24 need to assessed area; panel: why 4 studies on Arroyo if not any different? because of presumption 4 other places, are they bigger? 0.3% or not exhd (mostly Klamath); panel: final adequate pooled n? not relevant if not collected in diaries; POA2: clarification that 2 NRDAs w/in WOWR counties and 2 RAs (not understood by panel previously); panel: 67/day is natural average - applicable here?; have some regional data; panel: bag issue: ½ #, 3 trips per week for season is very different (& higher) than 67/day for limited year; post pond; panel: planktonic issue - analogy is 2 aquifers for headache - not same as 2 aquifers overlaid / take over the year; panel: hoping for more balanced report that does not need to be rejected out-of-hand - 67 of good relevant work - how applicable to this site? - need to bring in more literature and have more balance; good point - to have couple of pages of other work 4 states - not that far off of others - also, lack of work was counted w/ EPA - not significant acute does 4 -: use chronic/sub-chronic; panel - but is talking about chronic/acute - talking about dosage differences for chronic/sub-chronic; panel: App III on fish [5 - 7500 ppm; no - ppb Ø; panel - but need more description of upper bounds - could you assume high - need large doses; panel - not critiquing for fun - panel members care up w/ amazingly similar criticisms; panel: any obesity in FR? no; panel: random # generated is supposed to be associated w/ an individual - not included in the report - can't follow what was done; good point - used Crystal Ball; panel: do you believe that epidemiological study would conclusively show results gender on ½ & ⅓ overall cancer rate? do you conclude no effect because of conflicting or inconclusive results; risk management should address this even if not assessed; panel: no way could understand the risk could be stated?

4. Ed Calkins (side): any global negotiations? ① Zinc 96ll quote in COPC re FTC (Fish contracts? no - WOWR only, we said no to link until to at least assembly - comprehensive not be logical progression / products) ② FEC letter re cap; ③ FWS letter re NRDA (see prior post) - not to about FRF - no work? safety re 25%, more likely than not

5. Ed + Jim (pick): model application discussion w/ experts not to change the RETEC modeling scope, but to embed their opinions on the topic; can also talk about RETEC use of multimedia model; ok

6. Peer review meeting discussion
- non-cancer literature should be added to Exposure document
- must validate modeling wherever possible; i.e. Monte Carlo; Tuesday to Ø; may artificially lowers width because no actual Ø values; only Ø if can validate w/ validate by normal distribution skewed to high end as probably actual situation; Exposure assumed normal ~~distribution~~ Ø low; should use LOD, not Ø
- applies Monte Carlo analysis more abundantly
- some people still not carp and catfish; TEL had "other" category; can't assume one also can't assume skin off fillets; ODAR!

Hutchison study
- proposed more closely (date '05)
- input from WDNR/EPA; will 2nd draft large scale/detail, other particular issues
- Ed: future use of River: WQ criteria to be met, also PCB elimination some other that; all places all time; apply to water bodies - time component - long time goal; do you really want to meet WQS? may not be most relevant report for school; fallow vs unfallow WQS sampling - historically no; RAOs in FS give goals
- panel: chemicals adsorbed to sediment not really dissolved in water; no way do anything in sediment go to water; not all sediment PCB is accessible to fish
- Ed: looking at both monte Carlo and single-point; field vs lab - looking at both and balance; applies to ranges, but should talk about both; not a result of RI/FS/RA will address the voluminous comments
- ODAR: AEHS has opportunity to advise EPA on how to address FR proposals how to respond; implying Exposure doc not relevant caused to this
- panel: Thurs RETEC text/table problems and KB not accurate
- ODAR: volume of comments has caused real change to RI/FS - will not be the same
- panel on Thurs RETEC: too many acronyms; everything under sun in Report: focus on credible parts + put rest in appendix; not a good report; shotgun approach; any new data in risk report; yes - for FRs

7. voice mail: more
4 options model meeting
- Frank Valbur opt: -30% appt projection (was +15-20%)
* strongest use of model is to estimate loads to drive body
* drop use for final wheel rim analysis or water
- clean shrouded (galaxy); what problem to address with (Chevy) based solution
- more difficult & more specific
* where valid comparisons can be made, TMI matches not (large cases)
* trends off as factors select production, water production, and fundamental parameters (shown below)
* degradation rate could be affected (69-psed assumptions w/ 89-95 adjustments)
* have published results; how addressed longest AGE cycles

4. emails from office (6 BFO)

11 SEP 00 RO (page in sheet) WEEK "0"
1. Meet in RC: Charlie W., Dave H., David A., Don B., Peggy S., Joan G., Al Tosa, John Hanson, Mark Reiner, Bruce Baker, Doug Reed, Doug Kelly, John C., Rollie Walker
- ~~John Hanson~~ doing introduction; meeting facilitators to participate in settlement that is about to occur w/ WORK; explain why assemble separately, explain how address fact that we could; many practice questions - conducted for settlement purposes only

- Mark Reiner: background. Peggy talking to WORK on bad authorized effort earlier this year; also w/ FRF on SMC 58/57; FJC policy for cooperative effort SMC 58/57 to DC meet alone w/ WORK does not adjust to larger FJC facility; free use of active facilities; free landfill; and 87M to SMC 58/57 project; agreed to finish project at 58-7M this year; FJC did not allow use of FJC name in RFP press re NA 57/57; FJC is not part of coalition to stop dredging nationwide; invited FRF & NRDC and SMC 58/57 - declined; engender w/ FRF; FJC action may have spurred APT appeals; about to enter agreement w/ WORK
- John Hanson: overview of proposal: Ecologic service contractor hired by FJC; ② preparation required by FJC for transfer to public; ③ assessment of human use impacts undertaken by FJC; not contractor; ④ various ecological studies to address multiple purposes (natural & enhanced habitats); - designed to over-compensate ecological & human use; not included the benefits analysis for proposed ecological projects
- JH: human use impacts: 2 - 3 analyses to Bay assessment area (mid-upstream of FJC); human use 53-27% of total human use services; if PS Bay - Bay 65-32% of loss addressed; FJC balance better (PEF to be 23%; 30-40% (FJC-(-8%); FJC appeal comparative was the fact that ~~the~~ FJC would make FJC allocation 2/3-7%); above; average suitability for APT would be

- J Carlucci: to north? FH no grading this bay; OB-
structure elaborate of Alcatraz #2
- FH: details of proposal (Corps: staff cannot discuss
w/WORK in adv. Draft Guide); Cat I. clam-
Island 3 (30 acres → 90 acre more shallow);
major ecological benefits; $300K for Wild Rice
State Policy for wetlands; mainly (1-2K fed → 67 K fed)
- FH: RAP ISTAC has supported both of these
projects; WORK local managers support for the
ecology of the system
- FH: need discussion w/WORK power managers
- MR: properties; not located owners yet; working
w/WORK to identify 700 acres of properties (west
shore of River Bay); 1300 acres W. of Bay Terrace;
200 acres Bay shore; future type of state land;
60 acres north of Sturgeon State WL area; 300 acres
along Baltimore River
- Other bays not proposed FH: 1-3 are w/in
state project area
- MR: water says dredgers bought W. shore
- FH: Badger Paper wishes to sell 300 of 1200
acres in Bottom area; outside of project area
- MR: Upper use project (Ashland) (not state bay)
identified by local government
- FH: surveys show that ospr nest take place
on the outside islands (Bird Island) (land
is federal, actively used by fishermen); some
work for bosses used to model location;
methodology well established; not reconciled w/

NMR not; model (TER) emphasizes many factors, including energy, nutrients
inputs; ② ecological benefits more valuable than use (TER); ③ a use-weight
type of work but very wide: ↑ pt sys; all DOT, MT,
federal work; don't want to select values merely
of location; last TER uses RPP SP last R pre
step in fed study; 3/10 projects water fowl;
step 7 for catalog, excavation general; can use
with values of $; projects address 53-27% of
human access lost for FCAs (or 65-32% if
exclude shore DSPA); 2 estimates of losses;
actual behavior (RP) - also 50/50 RP/SP model;
federal approach analyzed - translatable? yes -
standard tiered cost methodology to monetize: 2 tiered
cost models used: proposed human use: $18M-48M
(25¢/MK vs 65¢/MK)
- FH: why fed/state should join now. ① mediation
decision not needed first (have award, NRD not very
influenced by mediation; have rough fed/state split);
② Bob Rogers agreed not to settle before me;
③ WORK has settled all state N.R. including all
issues w/ tribal jurisdiction; ④ settle one
via litigate later (S.O.L. expired) - NR losing work
work - might have to let whole bay; liaison
issue & confounding factors - other substances & natural
fluctuations & related loss & state agency - all
affects creates; limits jurisdiction of N.R.:
& trusteeship or vessel stops & not fish state;
double recovery bar - prohibit fed/state claim
for any WORK issue - what will be fully
documented; federal agency liability (ACOE plus
manager liability); court decree will be fed
September 30 (target date)

- MR: Lorbeer of coast, across what wetlands fed (Hume) ②
3 charges: ① eliminate Bay Road parkway;
mitigate Cat d. funding to $700K (100% of Bloom
Costs above of project); ③ property #4 to 400 acres
vs 300 acres
- GH: WORK ok with the 3 charges
- AT: summary: last 30 days: attys working on
MOU to be now; grassy fed (Hume wetlands)
wetlands 12th hour; willing to delay if
mitigation; explaining all PJC looking for
mechanism to make connection & NRP; need
continuum for days - shows opportunity; PJC
want to be part of solution, as has in the past
- GH: WORK sector (staff): must contact w/ PJC
consultants; good projects + interests about all of
them
- BB: when SBC asks staff - strong support
- OB: WORK means of support
- BB: WORK staff shaped the project but
- J. Harcourt: began in May: PJC willing to for 56/57-
last NRDA discussions; PJC does their part of
56/57; WORK does their part on NRP projects;
WOAT & WORK & PJC have a deal
= - 1 hour break -
- good projects on RCO - wrong scale
- OB: you have your deal; grassy not worth
much - more letter by letter you go
- CW: Clarify word to stop / scale; Dan upset
& CMS with

- ask WORK about their thinking on NRP re PJC
settlement
=
- RCO coming out in Oct. 8 years of work; precise
determination on how to make awards; will have key
role in our portion; wetland component & coastal wetlands
very important to us - appropriate in proposal; effects
on estuary very important to us - cultural &
Indian - Cat d. - very good project; human use
projects less satisfying; only access project for
Elson Bay Cr; gravel, picnic tables etc. not much
use; trade stock for more ecological; scale of
projects is a concern; need more of this, more than
Elsthat Bay - significant issue
- OB: scale more important than matching some project;
strong indicator of how you value deal / trade;
we get the deal with many - battle value
on proposal that we have offered; we are
willing to work on RCO - based on this proposal
- CW: more design by PJC?; AT: 56/57
not time to further degradation / responsibility
- JH: when?; CW - ballpark soon, more
precision in mid Oct.; 24 - hour notice for
hall pass
- OB: allocation is not the only scale issue
- JC: 2 use projects scaled; not valued or ranked so-
yet: OOF: services good, manual design - not good
restoration project (most put in)
- CW: looking for global settlement; time matters to

1430 for Briefall

-JH: time right now; we asked FRP - they declined;
-CW: may have changed; JH allocator fight
-JH: not trying to start [illegible] of settlement w/ Bobo; if designer w/ a settlement will argue w/ the company
-BB: wanted to know where Bobo actor before finalizing w/ FJC; [illegible] & slowly from folo (doesn't have to be solid); want to hear from FJC
-MR: scale under @ how related to allocator?; BB: you know the allocator diffuses - the distraction scale issue is huge magnitude
-BB: we will pass any counter proposal or our own work
-JH: a share: average liability counter?; BB - not at this time; JC - assessment from root, not liability
